

# Count on a trusted partner

Energy codes are changing.  
Electric vehicle supply  
equipment is a must.

New homes will need to be electric  
vehicle (EV) ready. Current and  
future EV owners want to easily add  
in EV Charging and comply with  
changing building energy codes.

Already, the leading source for model codes and standards, the International Code Council (ICC) is updating EV charging infrastructure guidelines. These will impact the International Building Code (IBC) and International Residential Code (IRC), which means that U.S. states and municipalities are likely to follow. Some areas have moved ahead with EV-ready requirements.

So what will the new guidelines require? That depends on the energy codes implemented regionally. Typically, electric vehicle supply equipment (EVSE) for new construction will require energy systems to be EV capable, ready or EVSE installed.

EVERYTHING  
AS A GRID

As electric vehicle adoption surges, making it easy to charge at home is essential. And there is an opportunity to differentiate by ensuring homes are ready for today and what's ahead.

- **Save now.** Take advantage of available utility rebate programs and recoup some EVSE costs.
- **Make install easy.** Eaton Green Motion smart breaker chargers provide flexible and fast installation options no matter what local regulations apply.
- **Smart charging is a game changer.** With EVSE powered by Eaton smart breakers, enable homeowners to manage energy costs by throttling charging power and scheduling charging times to take advantage of lower rates.

Plan ahead to save,  
simplify and build  
smarter homes.

#### Typical EVSE requirements

##### EV capable

Electrical panel with 40A, 208/240V circuit and conduit

##### EV ready

EV capable plus circuit protection and receptacle for charging

##### EV install

Fully installed EVSE ready to charge

GMEV32BR-DC

GMEV32BR-JB

Easy to install and flexible charging options powered by Eaton Green Motion chargers integrate into BR loadcenters. No matter how local code updates change, homeowners will want to better manage their carbon footprint and energy costs, even as their electricity usage soars. Scan the QR code and see how we can work together to make it happen.
